Chemical Dynamics At Low Temperatures (Advances In Chemical Physics)

Synopsis

The first unified treatment of experimental and theoretical advances in low-temperature chemistry
Chemical Dynamics at Low Temperatures is a landmark publication. For the first time, the cumulative results of twenty years of experimental and theoretical research into low-temperature chemistry have been collected and presented in a unified treatment. The result is a text/reference that both offers an overview of the subject and contains sufficient detail to guide practicing researchers toward fertile ground for future research. Topics covered include: * Developmental history * Formulation of general problems and the main approximations used to solve them * Specific features of tunneling chemical dynamics * One-dimensional tunneling in the path integral formalism * Special problems of two- and multidimensional tunneling * An extended presentation of pertinent experimental results
