Customer Reviews

Extremely simplistic in content and design. There are very simple pictures and very simple concepts. For example side of a card has a number 1 - 10 and the other side has a hand(s) holding up that many fingers. There are also cards that have the number on one side and a picture of that many things on the other.. There's cards to teach opposites (up vs down, heavy vs light, more vs less). Some cards have for example 8 mittens or 6 cats written on one side and the number on the other. Some cards have the name of a shape on one side and the shape on the other. There's ordinal numbers in the stack.I bought these for my son with down syndrome but a child with regular aptitude can learn basic math functions by rote with flashcards before the first day of kindergarten if a parent knows to teach their kids These cards are useful in building a good a mathematics foundation but pre K is more accurate in my opinionI would have given these flashcards four stars

BUT: These flashcards are thin and not covered by any protective film. The paper is thicker than the 500 sheet computer paper that most people buy but thinner than an index card. They aren't going to last very long and they don't slide against each other so they are hard to use. I hope this review helps. I had too much coffee so forgive me if I jumped all over the place in my description :-) Have an awesome day!

Described for Age Range: 3 - 7 years Grade Level: Preschool - 2 And others give 5* reviews as positive. WELL - they must live in illegal sanctuary cities with low educational standards... These are far below even basic Kindergarten. These would be great for Preschool and refine Pre-K readiness, intro to numbers and counting basics... Product is good but description is INCORRECT! -- it is NOT for Kindergarten Math.... (only in liberal sanctuary cities with illegal immigrants that should be deported such that we can again raise our educational standards throughout the US).

I really like this program. I saw it in another book store, but it was not as expensive with . I home school a 4 year old & her is learning really fast now. He is in 1st grade math now.

These math flashcards are the perfect items for my ESL preschooler to hone his math skills. He is proficient with his numbers; however, he is just now learning addition and subtraction.
